EED Files

Three all day asbestos samples were taken by St. Louis personnel and submitted to EED for counting. The results are summarized below:

Sample Identification	Fibers/cc
SL-63A-63B Operator Reliefman - No. 7 Line	0.17
SL-64A-64B Machine Tender - No. 7 Line	0.26
SL-65A-65B Machine Tender - No. 1 Line	0.23

In order to reconcile the results of the all day samples with those obtained from the one hour samples on the same operation it will be necessary to have some idea of the operator's movements during the eight hour sampling period. Therefore, on future all day samples, please indicate the movements of the employee with particular emphasis on the time spent on the operation being sampled.

If you have any questions about the above results, please let us know.
