Dr. Edward Eagle
Research Laboratories
Swift and Company
Exchange and Packers Avenue
Chicago 9, Illinois

Dear Dr. Eagle:

It certainly was a pleasure seeing you in St. Louis last week. We feel our visit was very worthwhile and are looking forward to learning of your progress with the FDA.

As we promised, we are attaching copies of our label on Aroclor 5460. This label happens to be for a sample, but it is the same for drum shipments.

We have checked our product specifications, and suggest the following nomenclature and limits be used in listing Aroclor 5460.

Chlorinated terphenyl
(% Cl.: 58.5 - 60.6; Softening Point:
98 - 105.5°C.)

Please note that our specification calls for a softening point rather than a melting point.

We shall look forward to hearing from you at any time.

Very truly yours,

David H. Bechtold
