January 7, 1977

SUBJECT: Telephone Discussion with Dr. J. K. Wagoner, Ms. S. Selevan and Mr. J. Dement - January 4, 1977

TO: NIOSH-Windsor Files

Further to my file memo of December 22, 1976, when John Dement had not telephoned me by 4:15 on January 3/77, I placed a follow-up call to Dement's office. His office advised that he was not available to take my call.

John Dement finally returned my call on January 4th, 11:00 A.M. and announced that Dr. Wagoner as well as Ms. Selevan were with him on the squawk box to talk to my request for an information meeting. Dr. Wagoner advised me that their final study report is near completion and should be sent to the companies sometime around January 17th and they intend calling a general meeting to discuss their findings around the week of the 24th. He expressed the view that my request for additional information should be met through the general meeting.

I told him that our statistician needed detailed methodology information on how the numbers were obtained and analyzed and that this type of discussion could not be handled at a general meeting as NIOSH has planned. I told him we want the information this week without delay.

Wagoner said that both he and Selevan were extremely tied up, wouldn't have time for our visit this week and suggested that he try to brief our statistician on the methodology by telephone. I agreed to try this.

John Rafter telephoned Wagoner around 3:00 P.M. on the same day and a lengthy discussion of over an hour ensued. A transcript of this discussion, taped with the permission of Dr. Wagoner, is on file.
