
From Bangor, Maine, to San Francisco

engineers, oil men, and gas men say, "Red-lead for metal protection"

THERE are many methods of protecting metal equipment from corrosion. But there is only one method that is generally accepted throughout the country. It has been proved that an overwhelming majority of engineers, oil men, and gas men use pure red-lead.

Nationally known engineering, oil, and gas publications recently sent out a questionnaire. They sent it to representative engineers and to men in the oil and gas industries who are responsible for the protection of metal equipment.

Here are the figures

Three hundred and fifty-two men replied. They included engineers from every state in the union, oil men from the Appalachian, Mid-continent, and California oil fields, and gas men from forty-two states. Yet in spite of the widely varying conditions under which they work, their agreement was startling. In answer to the question "What paint for metal equipment?" 82 per cent of the 352 said "pure red-lead."

The 352 men who answered this questionnaire are leaders in their respective fields. They are responsible for the protection of millions of dollars worth of property. They have tested all methods of protecting steel against corrosion. In view of the many paints on the market their close agreement is all the more a remarkable testimonial for red-lead.

Many use Dutch Boy

Many of these engineers, oil men, and [illegible]en said they use Dutch Boy red-lead. I[illegible] highest grade red-lead obtainable and it comes in both paste and liquid form. The liquid comes in the natural orange-red for first coats and also in greens, browns and black for finishing coats. The paste is obtainable in the natural orange-red and may be shaded to any desired dark color.

We maintain a special technical staff who are always glad to help in solving paint problems. Write them in care of our nearest branch.
