The following is an excerpt from the minutes of the Corporate Development Committee meeting of October 20, 1969:

"The meeting discussed the current St. Louis air pollution situation. The President advised that Mr. Eck should act as the focal point on all pollution matters.

"The recent publicity on the buildup of polychlorobiphenyls in fish, food and the environment makes it important that this entire situation be reviewed with the CDC. The Organic Division, in conjunction with the Medical and Law Departments, is requested to prepare a report to the CDC on the status of this matter and prospects concerning it."

J. N. Ehlers
