Aroclor to Sewer

FROM THE FILES OF THE
WGK LABORATORY
PLEASE RETURN

J. R. Kuster

Confirming our discussion of 12/29/69, no quantity of Aroclor or any Aroclor containing substance, regardless of how small, is to be put in the sewer. As a total plant it is necessary that we reduce the quantity of Aroclor discharged to the Mississippi River to less than 2 1/2 pounds per day. This will require very close control and a high level of commitment from every one who handles Aroclor.

Your cooperation in this matter is needed and will be greatly appreciated.
