HEAT TRANSFER FLUID

THERMINOL FR - Lo Temp

THERMINOL FR-Lo Temp is a low temperature, fire-resistant heat transfer fluid formulated specifically for practical pumpability at -20°F.

THERMINOL FR-Lo Temp permits installation of a non-pressurized system operating with a liquid that has no fire point, and will not support combustion.

The recommended operating range of THERMINOL FR-Lo Temp is -20°F. to 400°F. and will not show measurable change after years of exposure at such temperatures.

The fluid is non-corrosive with all common metals used in heat transfer system design.
