Use of ALFOL 2 in the applications mentioned is essentially unregulated, It's basically controlled by CTFA Ingredients listings (industry consensus, not FDA).

However, our ALFOL 2 is full of junk and without upgrading I don't think it's suitable for these uses.

Is Vista's alfol 2 stream

suitable for lotions? J

did not think it was.

Dear Sir:

We came to know from Soap Cosmetics and Chemical Specialities magazine that we can obtain Ethyl Alcohol suitable for fragrances, aftersaves, lotions and household products, from your company.

Could you please send me a brochure, a price list and if possible samples of your Ethyl Alcohol. *(alfal B2) = alumina*

I look forward to hearing from you. Thank you.

Yours Sincerely,

MOHAN PATEL
MANAGER
