Mr. Harry Boswell
Concrete Silo Company
P. O. Box 798
Monteagle, Tennessee

Dear Harry:

We arrived home around 9:00 Tuesday evening and had a very nice trip home. I am very well pleased with the way the silo business looks in Tennessee and I suppose you have the copy of the letter that I mailed Mr. Ray and know what I had to say to him.

Howie was having some trouble as you know with the paint. The formula for the mixture that he had there was what we are using, however, we use that hard paradene equal with the light and I believe, that it has a little more drying qualities. I would also advise him to try the arclor on a 50-40 basis, that is to say 50 pounds of the syrup and 40 pounds of the hard and see if this won't help out in setting. If it will, you will be just as well off as you will get the same results as you would the other way. Then also, on the solvents, the No. 3 solvent is very slow setting and if he is using 3 gallon of No. 3 and 3 gallon of No. 100, I would suggest that he cut off a gallon of the No. 3 and a gallon of the No. 100 and add 2 more gallons of the Xylol; or if he is just using straight No. 3 then I would use instead of 6 gallons, I would use 4 gallons and 22 gallons of the Xylol or in that proportion. I believe, this will give him a quicker set and he will get the same results as he would by using the formula that we do here. I hope you are still getting some business and will continue to do so and as soon as I can find out anything more about this loan company I will let you know.

Yours truly,

CONCRETE SILO COMPANY, INC.
