(2)

IBT No.: P7297

Client: Monsanto

Test Materials: (A) Aroclor 1242 (B) Aroclor 1254 (C) Aroclor 1260

Dietary Levels: 1, 10 and 100 ppm

Status of Study: F1 animals are starting to be mated. Sacrifice of Fo parental animals 1/14/70.

Body Weights: Fo - Body weights are normal

Food Consumption: No differences

Mortality and Reactions: One control female - F1a parturition
One 1242 - 100 ppm male - pre-mating
One 1254 - 1 ppm female - post-weaning
One 1254 - 10 ppm female - F1b gestation
No other deaths, and no reactions observed.

Pathology: None

Comments: Survival of pups (at weaning), in the second and third litters from females fed Aroclor 1254 at 100 ppm appears to be low. The lactation index of pups in the second litter from females fed Aroclor 1242 at 100 ppm appears to be slightly low.

Saving progeny from each group for tissue analysis. The pups are sacrificed and frozen at Day 10-12.

The animals receiving 1254 at 100 ppm were mated for a third time, because of the poor survival noted among the progeny from this group.
