Research Laboratories
10700 Euclid Avenue
Cleveland, 6, Ohio

Membership Application of
Ralph Martin McGrath

Dear Allen:

You will shortly receive an application for membership by Mr. McGrath who is at the present time engaged at the Western Electric Company in job evaluation of shop positions which includes the study of industrial health hazards and working conditions. He is especially interested in industrial noise and his work brings him in contact with a wide variety of industrial health exposures.

Actually, his closest approach to the problem is from a personnel relationship point of view in which most of his training has been.

Mr. McGrath is interested in industrial hygiene and would like to become a member of the Association. On reviewing his application you will note that he has had much graduate study and we would feel that in the case of this desirable applicant that it could be accepted in place of the required period of industrial hygiene activity in view of the fact that his present work on industrial hygiene has only been during the current year.

We believe that this man would be a desirable member of the association and also that it would be desirable to include a number of outstanding men whose major interest may be in allied fields.

Yours very truly,

Warren A. Cook, Director
Division of Industrial Hygiene
and Engineering Research
