Computer Center

The computer center is used to:

- Program test machines with predetermined test parameters
- Control test equipment operation
- Provide test data printouts giving a full analysis of the entire test

Computer provides:

- Data Reduction
- Printout of Test Data
- Storage of Data
- Retrieval of Data

In addition, other data reduction is accomplished from our test vehicles and this data is integrated into the computer center.

The typical printout shown above records various outputs from the test machine, including:
. . . Torque (Min, Max, Average) . . . Pressure (Min, Max, Average) . . . Speed (Initial, Final) . . . Temperature . . . Distance . . . Stop Number . . . and other pertinent facts . . .
