Subject: Carcinogens Task Force Report to E & R and M & S Subcommittees

T & A concurs with the proposed report as amended. See the attached marked up report & note the following comments.

The report incorrectly suggests chromium & benzene compounds have been reviewed by the PEO's. The T & A review and identification of parts known to contain chromium and benzene will not be completed until 5/16/80. meeting date 5/27

Transmission components containing asbestos classified as Group C should be reclassified as Group B.

T & A cannot agree to the elimination of all OSHA Category I carcinogens by Job #1, 1985. Until a T & A review and identification of parts known to contain OSHA Category I carcinogens is completed, this must remain an open issue.
