SUBJECT: E.P.-5290

Since we developed the asbestos-free recipe (E.P.-5290) which seems to work in an acceptance range on K-4 and Mark III type machines, we have the following suggestions.

1. To supply continuously the raw materials for this recipe.
2. To extend its usage for other required tools (Armco-Middletown, etc.) and machines (corrugated).
3. To use it, for an experimental purpose, (2-3 batches) on 1-Pc machine employing the tool #669 (Republic-Canton).
4. To consider the possibility to flash each machine and tool every Saturday morning (one hour or less before the shift ending).

Our further work with this recipe is to improve its green strength.
