SUBJECT : WEEKLY HIGHLIGHTS

REFERENCE :

TO : W. B. Papageorge - G4WA

The first meeting of the ad hoc industry/environmentalist/ EPA working group developing the recommendations for the "negotiated" incidental PCB rule was productive. A regulatory level of 25 ppm incidental PCB in products (annual average), with a 50 ppm maximum excursion, was tentatively agreed upon.

Levels of PCB in water and air effluent from these processes are under discussion also and approaching a consensus. (PCB levels in product for an exclusion from PCB regs under the October 21 rule are 2 ppm.)
