THERMINOL
PYDRAUL
SANTOVAC

## *Sales Information Bulletin No.* 77

DATE: MARCH 23, 1972

SUBJECT: PCB CONTAMINATION IN FOODS, PACKAGING

The attached Wall Street Journal article of March 20 confirms the restrictions of PCB's requested by the Food & Drug Administration mentioned in C. Paton's SIB of March 7, 1972.

The tolerances proposed are as follows:

| | |
|---|---|
| 1) Infant & Junior Foods | 0.1 ppm |
| 2) Eggs | 0.5 ppm |
| 3) Fish | 5.0 ppm |
| 4) Poultry (on a fat basis) | 5.0 ppm |
| 5) Animal Feed Components | 5.0 ppm |
| 6) Finished Animal Feeds | 0.5 ppm |
| 7) Milk & Dairy Products (on a fat basis) | 2.5 ppm |
| 8) Food Packaging Material | 5.0 ppm |

These are considered as "temporary tolerances" by the FDA and they are the levels at which products would be considered adulterated under food & drug law and subject to seizure.
