A I don't know exactly when that data changed. I was aware of that paper within the last few years.

Q And you are aware that Mount Sinai and NIOSH have reported about 900,000 garage workers at risk, such as in Dr. Rohl's study?

A No.

Q I guess it is your opinion, too, Doctor, that no matter how many reports of mesothelioma there are in brake repair workers, it is irrelevant without a proper epidemiological study?

A That is true.

Q Now, on another subject, the dust exposures from brake work.

Are you, or have you ever been shown any of Ford's own internal documents which show, as late as 1975, that exposures of garage mechanics to brake dust exceeded OSHA standard whenever air hoses were used to clean the dust out of the brake drums?

A I am not aware of that.

Q Were you aware that these high levels that
