SUBJECT DIELECTRIC FLUIDS: TISSUE RESIDUE STUDIES

REFERENCE

TO : R. H. Munch
T1B

Approximately 0.25 kg of each of the following fluids will be needed to carry out all phases of the residue studies.

Sample No.	Fluid
1	Aroclor 1043
2	Aroclor 1016
3	Aroclor 1242
4	MCS 1489
5	MCS 1475
6	MCS 1238
7	MCS 1302
8	(to be identified by R. H. Munch)

+ MCnoclloro benzene

If you will see that representative samples of these fluids are supplied to us, we will see that they are used to prepare the diets. Each fluid should be clearly identified as to source, lot number, composition, etc. For those fluids which are blends, several grams (5-10) of each of the components will also be needed for analytical method development work.
