Regarding your Note to Hosmer.
G.E. ANALYTICAL METHODS FOR AROCLORS

I am sending you a copy of the Determination of Color by the APH Method as issued by G. E., dated 10-29-40. I am also sending, under separate cover, a copy of Standard Methods of Water Analysis, 1925 Edition, which contains a write-up on the same method, p. 8 and 9. We have at Plant B a 1933 Edition of the same book in which this test for color is identical.

With regard to the remainder of these G. E. methods, it will probably take about a week of steady typing to make a copy plus quite a good deal of time to make copies of all the diagrams it contains.

Shall we attempt to do this, or do you think you could prevail upon Clark to send you another complete official set of their blue prints? That, of course, would be the simplest and most certain method of knowing we had exact duplicates.
