R. A. Baxter - Ruabon

We have small quantities of some di- and trichlorobiphenyl isomers. The supply is insufficient to pass around to anyone who writes in for a chromatographic standard. At the moment we have no plan to synthesize more or to make standards available by separation. We could make available milligram quantities of isomers to a few important laboratories. FF To date, we have sent only commercial Aroclor samples to two laboratories in the U.S.

Can you tell us what has happened to the pure isomer samples you supplied to Jensen and Widmark at U. of Stockholm or to Richardson of Shell in England? Is there something to be gained by supply known isomers? Have they confirmed or denied the original publication?

We would appreciate your report on results in Europe to help guide our action in supplying samples to Syracuse University Research Corporation.

Sincerely yours,

W R Richard
