RE: Your Purchase Order #42381
Dust Collection System
MI Proposal #M-211-6

Dear Doug:

In response to your letter of December 6th, we wish to confirm that after a cursory inspection of the system which was installed by your personnel, it appears to be in proper working order and doing a very satisfactory job. The specific areas that the system is servicing will satisfy the Federal, State and Local Air Pollution Control Regulations. However, I feel there are other areas in your plant that sould be improved and would like to sit down and review these with you in the near future. In short, there are other pieces of equipment such as batching mixers, so forth, that should be equipped with negative pressure exhaust dust collection systems. This would remove the problems associated with your loading operations when air is displaced due to the material and no matter how well units are gasketed there is a tendency for dust to migrate into the room area.

Recently, we proposed a Hoffman HV-237 Portable Vacuum Cleaning Unit which was specifically designed to vacuum up hazardous dust and particulate such as asbestos which may have settled or spilled within your plant. In compliance with the OSHA regulations, as you know OSHA frowns on sweeping hazardous materials and for this reason we feel this unit would be very helpful to you in your other plant areas. We would be pleased to review our proposal with you and provide additional information if necessary.

In closing, we are certainly happy to see the tremendous improvement in your plant operations now that you have the referenced dust collection system in operation. The working conditions have improved tremendously and I'm sure that your personnel are appreciative of this. We are looking forward to continuing our relationship and working with you on your other dust control problems; not only in this plant but in your other facilities across the country. I will be in touch with you soon in hopes that we can arrange a meeting so that I may review some of our other ideas and recommendations.

Yours truly,

Hal Miller

Mr. Hal Miller
Miller Industries
Division of Industrial Clean Air
Berkeley, California 94702

Dear Hal;

We have completed installation of the dust collection equipment purchased from your company. We request an inspection and a written statement that the equipment is installed per your specifications and will meet all federal, State and local pollution, and health requirements, per your guarantee in the original quotation as listed on our purchase order number 42381.

Please direct your correspondence to Bob miller or myself.

Respectfully yours,

Douglas W. Merrill
