your telex pyroclor - i discussed with dr. g. levinskas in our medical department.

1. any immediate measure such as stomach pumping etc. should have been taken within a matter of hours from the incident.

2. any supportive treatment would depend on the symptoms and this would depend on the amount swallowed.

3. if a physician was consulted and that physician needs any specific data about pyranol he should contact dr. g. roush here in st louis

cannot give further advice without more information. how did pyranol get swallowed. what was the quantity.
