215 E. Chicago Avenue, Suite 801
Chicago, Illinois 60611

Dear Denise:

As requested, I am sending you copies of the standard manufacturing process (SMP) reports that were available for departments 226, 236, and 237. Unfortunately, we could not find anything for department 268, except for a report that reconstructed the process that was used to manufacture 2,4,5-T esters.

I have read all of the SMP reports and I should be able to answer most of your questions, if there are any. As I mentioned to you earlier, the copies were given to me on loan and must be returned to the research library at Monsanto before the end of the year. Since the study should be completed by the fall of this year, this should not cause any problems.

Sincerely yours,

Terry L Leet
