Re: FDA Analysis, PCB's

J. E. Smith B2NB

This is to re-inforce your decision to replace Therminol FR-1 with Therminol 66 as the heat exchange system in Santicizer 334F. Mr. Westvier, Dow Chemical Company, asked me if PCB's were used in any of our processes for FDA regulated plasticizers. He strongly hinted that, if we do, Dow would not buy them. These would included Santicizer 160, Santicizer 141, Santicizer B-16, DOP and DOA which we no sell to Dow.

Please confirm that these processes do not use Therminol FR-1 so I can reassure Westvier at Dow.

Thanks.

P. R. Graham
