TOXICITY STUDIES
AROCLOR 1016, 1221
AND 5432

R. E. Keller - Queeny
A. J. Koenig - B3NP
W. R. Richard - T3A
E. P. Wheeler - A2SA

H. S. Bergen - B1SA

To strengthen our defense position, we must have more information on the effect of Aroclor 1016, 1221 and 5432 on birds and fish.

These studies were not programmed or budgeted for 1971. The chicken reproduction studies are estimated to cost $20,000. The fish sub-acute studies will probably cost $25,000.

I recommend we proceed with these studies. Your approval to over-run the PCB-Administration budget by $45,000 is requested.
