MAY

We are attaching the original of this customer's letter of May 13 and the thermo fax copies he sent us of the October 1958 issue of "Industrial Hygiene Digest."

Looking this over, it appears that Mr. Arnholt would like a statement from us if question #1 applies and none of the materials listed in the "Table of Threshold Limit Values" are in our Pydraul A-200.

If question #2 applies and Pydraul A-200 actually does contain some of the materials listed, you will have to figure out some sort of statement to make in regard to what precautions, etc. have to be observed in their use of the product.

This puts you on the spot somewhat; but, after checking over their list carefully, you will probably be able to come up with a real good answer, I know.

It may be more proper to relay this to Dr. Kelly or Elmer Wheeler in the Medical Department for an appropriate statement.

Much obliged.
