Doug Wood

October 6, 1976

Dear Doug:

This will supplement my previous memo on the subject of obtaining pricing information from Industrial Testing Lab.

The general memo attached, hereto, is selfexplanatory in that we want to proceed with this training procedure in order to have a letter of certification in our files.

I believe you have the test equipment in St. Louis at the present time so you might arrange to have one of their technicians come out at any time that you're planning to run through the asbestos and silica dust tests and have Elba and one back up person, possibly Ken from the lab trained. I realize that they're already qualified to do this because they have been running the tests but it will serve as a refresher and we can then obtain the letter of qualifications for our records.

Please follow through with Gordon at Toms River to have the same procedure established there possibly Gordon and one back up person to be trained accordingly. I'm sure they can get a local lab to come in and do this during the test monitoring period--possibly the lab who came in from Trenton or Newark and ran the first series of tests for us,,unless you're planning to have Gordon come back into St. Louis for any particular reason in which case he could be certified there. Thanks.

Cordially yours,

Julius Nemeth
