Dr. W. B. Papageorge
Monsanto Chemical Company
St. Louis, Missouri 63166

Dear Dr. Papageorge:

Our research group is currently involved in mutagenicity testing which employs the Ames Screen as its principal method of mutagenicity determination. In an article by Dr. Ames, et. al. of June 1975 in Mutation Research a reference to your name was found concerning the availability of Aroclor 1254 as a microsomal inducing agent used in the induction of S-9 rat liver homogenates for carcinogen activation.

We would like to inquire whether or not this chemical is still available and if so, make a request for a sample.

Thank you for your attention in this matter.

Sincerely,

J. E. Sinsheimer

J. E. Sinsheimer, Professor
Medicinal and Pharmaceutical
Chemistry
