would say in a situation where there is a clear exposure, that is what we should focus on.

MR. McGOWAN: All right. Thank you, that is all I have.

THE COURT: Mr. Williams, anything further?

MR. WILLIAMS: Yes, one more question, Your Honor.

RECROSS-EXAMINATION

BY MR. WILLIAMS:

Q Doctor, you cannot say to a reasonable degree of scientific certainty, can you, that people exposed to background levels like we were talking about earlier of asbestos get mesothelioma?

A I cannot tell you that people exposed to background get mesothelioma because of the asbestos in their lungs.

I can't tell you that, but we know that there are individuals with mesothelioma without a clearly documented exposure, and those are the ones who perhaps are highly susceptible and have that kind of background we are talking about.
