**Subject:** Sv: Meeting request - Viessmann - F-gases in F-Gas Regulation revision / PFAS restriction

Dear Carlos,  
Since we collaborate with Norway and they have the main responsibility when it comes to F-gases, I think it would be most effective with a joint meeting. Audun Heggelund will include us in the invitation if there will be a meeting.

Best regards

Jenny

Dear Jenny,

Thanks for your reply. Yes, we did contact Dr Heggelund in November and have recently followed-up for organizing a meeting with them in the next weeks.

Nevertheless, we would still be interested in exchanging on this topic with you and Ms Ujfalusi, as we believe that what we want to present and discuss would be relevant and useful for you, not only in view of the PFAS restriction (even though you are not leading on the f-gases front, you would have a say), but also the imminent F-Gas Regulation revision and the potential overlaps/synergies.

Please let us know if that would be possible. We could organize it as a subsequent meeting to the one we are planning with your Norwegian colleagues if you prefer.

Thank you very much in advance for considering our request and have a nice evening!

Best regards,  
Carlos

**Subject:** Sv: Meeting request - Viessmann - F-gases in F-Gas Regulation revision / PFAS restriction

Dear Carlos,  
Camille Dehestru has contacted my Norwegian colleague also working on the broad PFAS-restriction with the same request. Norway is working on the part on F-gases in the restriction proposal. I believe he replied that they will get back to you for a possible meeting in January / February.

Best regards  
Jenny

**Ämne:** Meeting request - Viessmann - F-gases in F-Gas Regulation revision / PFAS restriction

Dear Ms Ujfalusi and Ms Ivarsson,

We are reaching out to you on behalf of our client [Viessmann](#) to request a video call/meeting in the coming weeks to discuss the upcoming F-Gas Regulation revision (expected for Q2 2022) as well as the restriction under REACH of non-essential PFAS (to be notified to ECHA in June 2022). More concretely, our request concerns the topic of refrigerants such as hydrofluorocarbons (HFCs), hydrofluoroolefins (HFOs) and natural refrigerants which are used in heat pump and air conditioning applications. Viessmann is a leading German/European company in the manufacturing of heating, industrial and refrigeration systems headquartered in Allendorf (Eder), Germany.

Viessmann has contributed to the F-Gas Regulation revision process by participating in the stakeholder meeting in May 2021 and submitting input to the public consultation, which ran from September to December 2020. In parallel, Viessmann has also participated in the two Calls for Evidence on the upcoming REACH PFAS restriction - July 2020 and October 2021 – which also touches upon the issue of f-gases. Moreover, Viessmann submitted confidential information to consultancy 'Exponent' which supported the MSCAs in the collection of additional data from manufacturers of refrigeration and heating, ventilation and air conditioning (HVAC) equipment. On this basis, we would like to present Viessmann's position and our analysis on some of the aspects that will be addressed by these two processes. We would be glad to exchange views with you on the feasibility to transition to suitable and sustainable future-proof alternatives in the heat pump market and discuss our forward-looking proposals for the next steps.

Since f-gases are impacted by two different regulatory processes, we would like to suggest a joint meeting between Viessmann, the Swedish Environment Protection Agency and KEMI if possible, so both angles (F-Gas Regulation and PFAS Restriction) could be covered in the meeting. Otherwise, we would also agree to hold two separate meetings if you prefer.

If the meeting request is agreeable to you, could you please let us know when it will be suitable for you to have a meeting? We will be happy to send WebEx invitations.

Many thanks in advance for your reply. We remain available should you have any questions or require additional information from us in the meantime.

Best regards,  
Carlos
