engineering mechanics classes relate to friction materials from the standpoint of temperatures, stresses and the like. Yes.

Q Okay. Did any of those courses involve the study of asbestos?

A No.

Q Okay. Aside from the courses you have taken in the field of automotive engineering, do you have any practical experience involving the replacement of friction products in vehicles?

A Yes, I do.

Q And what practical experience is that?

A Well, I learned about cars at an early age. My dad bought me a car before I was able to drive and said if you can take it apart and put it together, then you will be prepared to drive, so I did that for a year.

I worked in a gas station in high school and after I got into college, I was able to do work as a tune-up and brake mechanic.

Between 1954 and '56, I was working full
