Clay Oven - Tank Farm

V. T. Langdon
Anniston,
Alabama

I received your quotations for a proposed oven to dry treating clay in the new tank farm, rather than in existing ovens by the second floor control room across the street. The quotations seem adequate for the job. I would estimate that the total installed cost to Monsanto for this item would approach $3,000.

There was no information to indicate why this clay cannot be carried across the road in manageable sealed containers. For instance, Krummrich Plant operators carry this clay from an oven to the top of their tank in an open enamel bucket, several trips per batch.

Shall I return the quotations to you, for possible plant action, or shall I await your resolution of a possible variance with the Technical Production Manager?

R. W. Peterson
Project Manager
