know, different configuration, but they are nonetheless asbestos-containing friction material and generate dust as well.

Q Was there any recommendation -- what was the recommendation in paragraph 1 about warnings?

A Well, we wanted the area to be posted with this particular warning, that is, to set aside an area in the shop that was going to be used where brake repair work would be done. So it is a designated area, to post a warning for people who might have occasion to go into that area.

It is part of isolation, we wanted the process to be isolated as much as we could.

Q Did the proposed sign that was posted warn or suggest that the individual be warned about the potential of asbestosis and cancer?

A Yes.

Q Was there also in the OSHA document a warning statement that was ultimately enacted?

A In 1972, yes, it was.

Q Was it any different than the warning
