

HEATING AND VENTILATING

Formerly The Heating and Ventilating Magazine

Founded 1904

521 FIFTH AVENUE

NEW YORK CITY

Heating and Ventilating has long been accepted as the authoritative publication in the field of heating and ventilating. With the cooperation of those progressive engineers and contractors who have given so generously of their knowledge, Heating and Ventilating has been largely instrumental in bringing about a better understanding of the many difficult equipment and application problems which have arisen during the last twenty-six years.

Heating and Ventilating is continually alert to aid in accelerating the perfection of heating, ventilating and air conditioning equipment and its application. In line with its responsibility of leadership Heating and Ventilating has inaugurated during 1930 an additional editorial service. Reference Numbers will now be issued regularly.

Reference Numbers are planned to discuss the peculiarities and special features of the systems for the type of building to which the Number is devoted. The design of a church heating system is an entirely different problem from the design of the system for an industrial plant. The ventilating system for a restaurant is totally unlike the air con-

ditioning system in a theater. Since each type of building has so many special features, has different costs for installation and operation and has different conditions to meet, each is treated separately in a special number.

Reference Numbers are designed to be saved, to be used for just what their name implies—as reference data. They will constitute a self-perpetuating reference library on school buildings, office buildings, public buildings and institutions, theatres, churches, hospitals, department and other stores, transportation buildings, industrial buildings and hotel and apartment buildings.

Although Reference Numbers are priced at one dollar, they are furnished to regular subscribers (\$2.00 the year) at no additional charge.

Heating and Ventilating offers the manufacturer and distributor of heating, ventilating and air conditioning equipment a direct first-read medium of sales contact to the men who specify, buy and install this equipment.

Sample copies advertising rate cards and market information sent upon request.
