REPORT ON FOSECO MINSEP INC./CLEVELAND, OHIO/
Frank Bilton,/Tony Heins/

Purpose of this meeting was to announce 10% increase in price of Amosite.

Foseco sells insulation risers to steel mills and foundries. Volume remains stable to the foundries, but is off about 40% to steel mills.

Due to resistance to asbestos, Foseco now produces non-asbestos products. According to Frank, they use Cera Fibre (Alumna Silica) from JM, Kayo-wool from B & W and Fibre-fax from Carborundum and Mineral-wool from Bethleham.

They would not speculate on the effect of our price increase, stating only that with each price increase received in the last 18 months their demand for Amosite had decreased.

Bilton asked that we retain his allocation of 1,500 metric tons for 1975 until he had an opportunity to meet with management and production to assess the impact of the cost increments.
