TO :

C. R. Field
B2NG

I see that the following shipments were made in 1974 to transformer accounts who are no longer approved under our dielectric PCB policy:

Inerteen 70-30

Allis-Chalmers, Springfield, Illinois	1350 lbs. Jan.
Federal Pacific Electric, Milpitas, CA	4040 lbs. Feb.
ITE, Oklahoma City	2700 lbs. Jan.
ITE, Trenton, N. J.	3370 lbs. May
ITE, Spartanburg, S. C.	3370 lbs. May

Allis-Chalmers and ITE were approved but both have ceased manufacture of askarel transformers and they cannot qualify to buy PCBs for repair-shop operations. FPE elected not to continue to manufacture askarel transformers when we announced our PCB policy in January 1972 and again cannot buy from us (even though they are covering Cornell-Dubilier, a capacitor subsidiary).

Please make sure that all your correspondents are familiar with who is and who is not approved. These changes have all been communicated to COP and the field. If you are in any doubt as to the current approved list please communicate with David Wood. By copy of this memo I am asking the regional managers to make sure they and their salesmen scrupulously abide by our PCB policy.

Thank you.
