A few brief facts about Solid Aroclors: what is made here?

1. Aroclor 5460 can be made in the #1 liquid line when transfer line can be installed from #1 line to new flaker.

2. A 30-ft. section of jacketed line will be installed and, hopefully, will be in by January 1969.

3. If we put 3 chlorinators on 5460 (amount needed), we are essentially out of liquid production except 1242. (continuous line) at Anniston.

4. Liquid Aroclor inventory at Anniston has gone DOWN at Anniston since 11/1/68 (from 3.3 M on 11/1 to 2.7 M on 11/25) Cannot switch to solids as long as this exists.

5. Must have ability at Anniston to continue to make plasticizer grade 1248 and 1262 from trappings.

6. Cannot make 1268 in anything but a solid line.

7. Can make 2565, 5442 and 4465 in liq. line.

8. Pseudo 4465 (5460 and 1262) production under way.

9. Heavy availability of 1242 at WGK doesn't help make room for solids at Anniston.

10. New flaker will come on sometime in December. Other improvements in solid line should be in in December.

You may have questions. If so, I'd like to discuss.

Herb.
