Dear Bob:

At the present time, we are contemplating the development of a bibliography on the epidemiologic aspects of lead exposure with the California State Department of Health. The logical suggestion was made that you probably maintained such a bibliography, and I merely wanted to verify this before proceeding any further with our own project.

I had not been aware of a publication out of Kettering of this nature, but I wanted to get a statement from the fountainhead. If such a collection exists I would like to visit some time in the future to learn what is available.

While writing, I would like to bring out one other point. We have wanted to show our students a sample of tetraethyl lead, but so far I have been completely unable to pry a sample loose from the Corporation's local representative. Do you have any suggestions as to how we might go about obtaining a sample for this single use?

For your guidance, as always, my many thanks.

Warm personal wishes.

Cordially yours,

J. S. Felton, M. D.
