SUBJECT : STABILITY OF AROCLOR

REFERENCE : British Insulated Callender's Cables Ltd.
Mr. Edward H. Reynolds, Director of Research

TO : Chairman, Sub Committee 10B
CIGRE Study Committee No. 1

TO Dr. Ralph H. Munch - SECOND STREET

Mr. Reynolds presents thoughts about the character of the various stability tests now used for askarels (Aroclor).

He presents BICC Report No. 308 and No. Ch/T. 350 as different techniques to be presented at the next CIGRE Sub Committee 10B meeting, of which Mr. Reynolds is chairman.

We need to present Monsanto's views regards the methods being proposed. If these methods were adopted at Committee 10B, this would then also be brought up at ASTM and become an Industry Standard, if acceptable.

Therefore, this needs our thorough and careful attention.

When you have had a chance to study this, let's meet to formulate handling.

Thank you.

Paul

P. G. Benignus

/ecd

P.S. You may want to make copies of the attached methods. I have only the single copies from Mr. Reynolds and will need them at our next 10B meeting.

What else? PGB
