TO : A. E. Peterson - F3EB

I have reviewed the December 28, 1979, draft that you prepared of the PCB regulations and SPCC guidelines and have discussed the merits of completing the project with Jerry Schroy and Bob Nelson, in addition to you.

We all agree that the PCB guideline would be a valuable asset to plant, CED staff and others in Monsanto needing guidance in handling and disposing of PCB's. We also concur that the project should be continued as planned to publish the guideline as a "Hazardous Chemical Exposure Task Force Workplace Exposure Control Guideline."

I would like to obtain your commitment to completing the guideline project by revising the draft per comments received in the December 28 circulation and publishing the document as planned. Hopefully, we could target to having the revised document completed by mid-September so that it would be circulated for other necessary reviews for publishing the document in the "Hazardous Chemical....Guideline" before the end of fourth quarter. However, the sooner we can accomplish completion of this project, the better.

Al, the draft represents a tremendous effort at digesting the regulations and providing good, practical guidance to staff having responsibility for handling and disposing of PCB's. I certainly want to encourage you and give you my support in completing this project.

John Craddock
