Brazil Incinerator

The review of the design conditions for the San Jose, Brazil S-160 incinerator shows that the unit is not adequate for PCB disposal. Design temperature is ∿980°C vs. the required 1600°C (±100°C) at the design 1.5 second residence time.

EPA Enforcement Activities

The largest penalty ever sought by EPA for alleged PCB rule violations was served on General Motors Company at its Central Foundry Division in Massena, New York. A penalty of $507k is asked for 21 counts of PCB rule violations.
