cancer.

Q What is the basis and reasons for that opinion, Dr. Gabrielson, what you have told the jury here today?

A Yes, sir. The understanding that asbestos causes mesothelioma, understanding that it develops over a long period of time and that there are many genetic changes required to produce a cancerous cell.

Based on all of that evidence, it is my opinion that all of those asbestos exposures contributed to the development of this cancer.

Q I want you to also assume that, beginning in 1957 for approximately a month and in 1958 for at least five months, he was exposed to dust created by the use, handling and application of Kaylo pipecovering and also Kaylo block.

And that those products were used at jobsites by pipecoverers in his vicinity, and cut and sawed in his vicinity creating asbestos-containing dust which he inhaled.

Assume that, again, the material contained
