Monsanto Chemical Company
800 N. Lindberg Boulevard
St. Louis, Missouri 63166

Dear Sir:

Recently I read in an editorial in Chemical and Engineering News, May 3, 1971, that Monsanto is no longer producing polychlorinated biphenyls (PCB's) for uses other than in closed systems. As there is a growing body of evidence inplicating the PCB's along with DDT as serious environmental pollutants, I was glad to see that there is a company conscientious enough to stop promoting their use where they might reach the environment. At a time when many corporations are resisting efforts to reduce pollution, news of Monsanto's action comes like a breath of spring air. Your company has my deepest respect.

Sincerely,

W.K. Steele
