PCB FISH STUDIES - U.S.

D. S. CAMERON - BRUSSELS

We do not have very much to offer from fish studies in the U.S. The studies we asked Industrial Bio-Test Laboratories to conduct for Monsanto were discontinued when we found evidence of cross-contamination. We have asked for a resumption of these studies.

Attached is some recent data from a governmental laboratory located in Columbia , Missouri. You may share this information, if you wish, with the Ministry. Whenever I get additional fish data, I'll forward it to you.
