BIODEGRADABILITY
AROCLOR 1221

H. S. BERGEN
M. W. FARRAR - 2ND STREET
D. A. OLSON
W. R. RICHARD
J. E. SPRINGGATE

C. PATON

Your suggestion that we publicize to our Salesmen the information that Aroclor 1221 apparently biodegraded easily both in the Ruabon tests as well as the South Second Street tests has merit in that we can pass on good news in this instance. We must, however, be prepared for the inevitable question regarding what happens with the other Aroclors. Data to date has not been encouraging and we must be very careful what our salesmen communicate to our customers. Work on activated sludges and modified distilled Aroclors continues.
