Got a conference call from Jack Mayausky, Manager of the Monsanto Plant Anniston that has PCBs in a ditch that leaves the property, and Dr. Bob Kaley, an epidemiologist at the corporate headquarters in St. Louis: 31 694-8558. They have sent off more samples. They have also been performi quick test and have positives at >1 and >10 PPB (or was it PPM) even in adjacent soil out of the ditch. They have consulted with Renate Kimbrou Both Kaley and Kimbrough state that the PCB is not a particular risk to community. They are talking with the community. They are about to give call to the reporter that has been writing stories about their plant an the PCBs.

They welcome your talking to Jack (205-231-8427) or even making a visit Anniston. For other more scientific questions, call Kaley who would eve happy to connect you with Dr. Kimbrough.
