We send proofs

(Post Office Department rules require that proofs be sent in all advertising)

WHEN you consider the lead lined pipe and fittings you require, look beyond the mere service they are expected to resist. Consider, for instance, the shock to which they may be subjected, such as water hammer. What is the factor of safety with which the leading "Bonded" lead lined pipe and fittings will stand up? Will they crack or develop leaks? Predictions will not suffice. Only years and strains of service, in addition to laboratory tests, can prove it. You get this in "United Tubond" lead lined pipe.

"UNITED LINED EQUALS"

means corrosion resistance plus strength, durability, ease of handling and pumps, installation and replacement, and lasting satisfaction for years and years. Chemicals, fumes and explosives, chemical fumes and products, etc.

Let us send you nature's proof and our installation system with it.
