MON-2594

SAC Meeting - September 11, 1978

On Sept. 11 the SAC committee met with Brubaker, Clark and Glass to establish guidelines for updating the bulletin P-0130, Respiratory Protection Procedure.

Key points are -

1) The need (or potential need) to wear breathing air masks in the performance of work will require removal of excessive facial hair. Being "field assigned" does not in itself require removal of excessive facial hair. Only the need to wear masks in performance of work.

2) Better definitions for "emergency work" will be developed so as to contrast with "emergency escape." Escape masks are full head cover masks for which facial hair is not considered a problem.

3) Specific name lists of individuals required to be clean shaven will be developed by each department.

4) There will be no gas testing facilities (not required by law). Those needing to wear masks will be required to be clean shaven.

SAC Action Plan -

1) Revise P-Bulletin P-0130 and secure PMSB approval by October 31.

2) Communicate program down through line by November 15.
