General Offices - St. Louis 66, Mo.

July 3, 1962

Pydraul A-200 - General Electric
Cincinnati 15, Ohio

Memo - R. Davis to C. R. Groninger - 6-12-62

Mr. A. D. Evans - G.O.
Mr. G. R. Graham - G.O.

In relation to General Electric's use of Pydraul A-200 and Pydraul F-9 mixture in missile case testing, I believe you can tell Mr. Utz that the vapors or decomposition products of the mixture or of the "damaged fluid" would be no more toxic than the vapors of either one of the pydrauls used alone.

I assume from the comments in the call report by Mr. Graham, that this is the question Mr. Utz raised. Therefore, I have not included a full discussion of the toxicity of either of the pydrauls.

Elmer P. Wheeler
