Mr. W. S. Henley
Route 2
Decherd, Tennessee 37324

Dear Mr. Henley:

We have received the laboratory reports from the Federal Food and Drug Administration showing the presence of PCB residues in silage from your silo which exceeds the tolerance level of 0.2 PPM.

As soon as the silage level has diminished, you are requested to refinish the interior of the silo in order to remove the PCB coating. The presence of PCB residues in animal tissue is prohibited.

Yours very truly,

Eugene H. Holeman, Director
Food and Drug Division
